ABSTRACT

SafeHer is a web-based Women Safety and Emergency Response System developed using Spring Boot, JAVA, HTML, CSS and MySQL. The system provides user registration, login, emergency contact management, SOS alert generation, live location sharing, and incident reporting. It stores emergency information securely in a database and provides a centralized dashboard for quick access to all safety features. The project aims to enhance personal safety by enabling faster emergency response and communication during critical situations.

INTRODUCTION

- SafeHer is designed to address increasing safety concerns faced by women in daily life.
- It uses Java technology to build a reliable and easy-to-use safety application.
- The system focuses on providing quick access to emergency services through a simple interface.
- It integrates multiple safety features like alerts, tracking, and contacts into one platform.
- The project aims to create a dependable solution for improving personal safety and confidence.

PROBLEM STATEMENT

- Women face unsafe situations while traveling or working alone.
- Existing safety apps mainly focus on basic alert systems.
- Many applications lack intelligent route analysis.
- Delayed emergency response increases risk.
- Real-time monitoring is missing in some systems.
- There is a need for a smart and efficient safety solution

LITERATURE REVIEW

. No.	Author(s), Year	Title of Study	Problem Addressed	Methodology	Key Findings	Limitations
1	Sharma & Patel, 2015	Women Safety App using GPS (2015)	Lack of real-time safety monitoring	Basic Java app with GPS tracking	Provided location tracking	No secure login, limited features
2	Kumar et al., 2017	Emergency Alert System for Women (2017)	Delay in emergency communication	SMS-based alert system	Quick alert to contacts	No database, no dashboard
3	Reddy, 2018	Smart Women Safety System (2018)	Lack of integrated safety features	Android-based safety app	Combined alerts and tracking	No police integration, limited UI
4	Singh & Verma, 2020	Women Safety Application using Mobile Tech (2020)	Difficulty accessing multiple services	App with GPS & contact features	Improved accessibility	No structured data storage
5	Ali & Joseph, 2021	IoT-based Women Safety Device (2021)	Inefficient emergency response	Sensor-based alert system	Fast emergency detection	Hardware dependent, costly

METHODOLOGY

MODULE 1: USER REGISTRATION & SECURE LOGIN SYSTEM

- ✓ Provides secure user registration and login functionality.
- ✓ Allows new users to create an account by entering personal details and credentials.
- ✓ Validates user information and stores data securely in the MySQL database.
- ✓ Authenticates users during login using their registered username and password.
- ✓ Ensures that only authorized users can access the SafeHer dashboard and safety features.

MODULE 2: SMART SAFETY DASHBOARD & EMERGENCY FEATURES

- ☐ Provides a centralized dashboard for quick access to all safety services.
- ☐ Enables users to trigger an **SOS Alert** during emergency situations.
- ☐ Displays emergency information such as alert status, location details, and emergency contacts.
- ☐ Supports **Live Location Sharing** to help track the user's location during emergencies.
- ☐ Allows users to quickly access safety-related features through a simple and user-friendly interface.

MODULE 3: INCIDENT REPORTING & SAFETY MONITORING

- ❖ Allows users to report safety-related incidents and emergencies.
- ❖ Stores incident details securely in the MySQL database.
- ❖ Maintains a record of reported incidents for future reference.
- ❖ Helps monitor and analyse safety concerns in different locations.
- ❖ Supports quick documentation of emergency situations through a user-friendly interface.

ENGINEER TO EXCEL

CONCLUSION

- Secure and user-friendly women safety platform
- Integrates registration, login, and dashboard
- Provides SOS alerts and live location tracking
- Efficient database for data management
- Ensures real-time safety and quick response

Safe & Her

FUTURE SCOPE

- Integration with **real-time GPS tracking and Google Maps**
- Adding **SMS/Call alerts** to emergency contacts
- Use of **AI for unsafe zone prediction**
- Mobile app development for better accessibility
- Integration with **police and emergency services systems**
